Ch. 15 HW #2 – Solutions

Principles of Microeconomics

December 15, 2025

Quick Quiz

4. (d) – Profit maximizing firms produce the quantity at which marginal revenue (price) equals marginal cost, so the marginal cost curve determines the quantity supplied for a given price. In the short run, firms' fixed costs are lost regardless of whether they produce, so they will produce as long as their revenue is greater than their variable costs.

5. (a) – Profit maximizing firms produce the quantity at which marginal cost equals price. That means if marginal cost is between average variable cost and average total cost, price is between average variable cost and average total cost. Therefore, the firm makes enough revenue to offset their variable costs but not their total costs. In the short run, they will keep producing to minimize their losses, but in the long run, they will exit because they're unprofitable.

Problems & Applications

2. Leah's variable cost per day is

$$\$280 - \$30 = \$250.$$

   Therefore, Leah's average variable cost is

$$\$250/10 = \$25.$$

   That's less than her average revenue of \$27, so Leah produces in the short run.

   In the long run, Leah's average total cost is

$$\$280/10 = \$28.$$

   That's greater than her average revenue, \$27, so Leah exits in the long run.

4. (a)

Q	FC	VC	AFC	AVC	ATC	MC	Profit
0	100	0	–	–	–	–	-100
1	100	50	100	50	150	50	-100
2	100	70	50	35	85	20	-70
3	100	90	33.33	30	63.33	20	-40
4	100	140	25	35	60	50	-40
5	100	200	20	40	60	60	-50
6	100	360	16.67	60	76.67	160	-160

(b) See the profit column above. No, shutting down is not a wise decision because their losses would be greater from shutting down than they would be from producing 4 cases.

(c) The firm's losses are $100. It's not the best decision because if the firm produces 4 cases – the other quantity at which marginal cost equals marginal revenue – its losses are smaller, $40. That's because the firm's marginal costs decline at first, so the firm's marginal costs are actually less than its marginal revenue for cases 2 & 3.
